

Nitro Joe's Science Show

*Engaging,
Entertaining,
Inspiring*

About The Shows

IT'S A GAS

Children and adults alike will be amazed by the impressive science experiments in this show. Potions will change color, bubbles will flow and creeping fog will cover the floor. Children will be more excited about science than ever.

AIR IN ACTION

This ephemeral and billowing show allows students to understand just how real air really is. Nitro Joe will use air pressure to crush objects and move things around. Bernoulli's Principle will be demonstrated by making toilet paper fly and by creating Tornado Donuts.

SCIENCE MYSTERIES REVEALED

The show will help children understand that magic tricks are just unexplained science experiments. Things will appear to disappear right before the children's eyes. Impressive, controlled explosions will dazzle the audience and keep them talking for days.

This is one of the most entertaining and interactive science shows that you've ever seen! Nitro Joe's energy and enthusiasm will keep audiences of any age fully engaged.

There are currently three different shows to choose from. All of the shows share the following features:

- Shows are 45 - 55 minutes in length.
- Shows are generally presented to children in grades K through 8th (older children will still enjoy the programs more than they are willing to admit).
- Shows require a table, access to electricity, and access to water before and after the presentation.
- Most experiments are done in front of the table, there needs to be at least six feet of space between the table and the audience.
- Volunteers are frequently asked to assist in experiments.
- The maximum audience size for any show is 300 people.

HOW MUCH DOES A SHOW COST?

\$300 for fewer than 100 children; \$350 for 100 to 300 children.

Any program that is more than 35 miles from zip code 63111 will be charged a travel fee. The cost is .50 a mile round trip from zip code 63111 to the zip code of the destination.
